

## **Subject: Identification of AI Tools for Implementation of Disruptive Innovation Initiatives in Supply Chain Management**

During the workshop on “**Disruptive Innovation**” held at **Bokaro Niwas** on **02.07.2027**, the group comprising **CGM (Maintenance)** and **CGMs (Materials Management)** deliberated on various initiatives aimed at enhancing the efficiency and effectiveness of Supply Chain Management through the adoption of Artificial Intelligence (AI).

The following innovation initiatives were identified along with the target date for implementation:

| <b>Sl. No.</b> | <b>Innovation Initiative</b>                                                                     | <b>Responsibility</b> | <b>Target Date</b> |
|----------------|--------------------------------------------------------------------------------------------------|-----------------------|--------------------|
| 1              | AI-based Demand Forecasting                                                                      | CGM (Maintenance)     | September 2026     |
| 2              | AI-based Technical and Commercial Evaluation                                                     | CGM (MM)              | September 2026     |
| 3              | AI-based Cost Prediction which may help negotiation of Ferro Alloys, Raw Materials & Consumables | CGM (MM)              | September 2026     |

In order to facilitate implementation of above initiatives, technical guidance is required for identifying appropriate AI solutions, evaluating their suitability, estimating subscription/licensing costs and determining the appropriate source of procurement.

In view of the above, it is proposed that **C&IT, BSL** and **SDTD, Ranchi** may be requested to extend their assistance in the following areas:

1. Identification of suitable AI tools/platforms for each of the above use cases.
2. Technical assessment of the recommended AI solutions and their compatibility with SAIL/BSL systems.
3. Details of subscription/licensing charges, implementation requirements, and recurring costs.
4. Any additional infrastructure, cybersecurity, or training requirements for successful implementation.
